

BT Germany (rebecca.thalmaier@bt.com)

BT (Germany) is an international provider of ICT Technology operating world wide. BT Global Services, the branch for Business Services and Solutions addresses global operating companies and European companies with a transnational approach. On the basis of a world wide operating network and strong strategic partnerships, BT Global services is able to serve customers in all important commercial centres in Europe, America and Asia. We would offer interns an opportunity to learn a lot more about the ITC world and international working environment within complex matrix organizations.

Possible locations would be Munich, Frankfurt (Eschborn), Stuttgart, Ratingen and Hamburg.

The ideal candidates will study or will have studied economic or IT related subjects and be fluent in either German or English. However I am afraid we are not in the position to offer an intern payment in the near future as this would not fit into our international specifications at the time being.

As I have understood you, the programme would support the students in exchange for proving a successful internship. I think this would lead to a solution that is acceptable for all participants. I have also understood that the way the programme applies it, interns would come primarily from outside Germany, which is fine as we are very international and almost everybody with BT speaks English. Hopefully I have included all relevant information. For any further questions don't hesitate to contact me. You may also forward my contact data.

I am really looking forward to your feedback and thank you very much for your support in Advance.

Kind regards,

Rebecca Thalmaier
